When you use this software, you can enjoy all the characteristics and styles of a variety of music, and you don't need to spend hours in front of your PC as you can do with most of the other generators. The software supports two ways of completing the task - Drag & Drop and Form Fill. The Drag & Drop method works just like ordinary Drag & Drop where you drag in the songs you want to the main window and select the output folder you want to create and choose the output path and it's done. After that, you can play all the songs in a few clicks if you want to, to check if the result is what you expected. Alternatively, the Form Fill allows you to set all the songs you want, regardless of the directory structure, and you don't need to be skilled at programming. Simply, you can set the number of input files and then fill in all the information which you want. The Form Fill method also lets you change the background image, however, the configuration is more in-depth than the Drag & Drop. You can change the number of the songs, set the file size, the number of output files and select all the information you want, such as the format, directory structure and the list of the files' information. It can convert video to audio as well. After filling in the information for the Form Fill method, you can select the method to use and follow the wizard to convert the videos. There is no manual provided, so it's recommended to follow the guide. You can then select the output format you want to use. You can even change the song information through the available options if you want. For example, you can add custom meta-data to the files, change the bit rate, quality, file size or place a background image onto the project. If you try this software, you will be able to find additional information about it by reading the manual. There are very good descriptions in the manual for the software. One can be accessed from the help menu and the other

is the instructions and features tab. One of the most useful features that you will enjoy is the fact that it can recognize the songs and videos. The software will inform you of the number of these files you are dealing with and you can choose which music files to convert or video files to audio. Other features include the ability to rename the files, tag them and set them for conversion as well as play the song while it is converting. If you have a major issue,
